What is a Patent?

A **Patent** is an exclusive right granted for an invention, which is a product or a process that provides a new way of doing something, or offers a new technical solution to a problem.

Services of Patents Experts

In terms of the South African Patents Act, individuals may file their own provisional patent applications. It is however, advisable for applicants to seek the assistance of the patent attorneys. If a provisional patent application is filed, the strength and scope of protection ultimately obtained will depend on the wording and content of the description of the invention. The Patent Office takes precautions to maintain confidentiality but can not be held responsible for what occurs outside the office. South Africa is one of 142 countries that is a member of the Patent Co-operation Treaty (PCT). This Treaty allows an individual to file an international application as well as a national application. The international application will designate countries in which the applicant seeks protection. Extra fees are payable for this type of registration. The Patent Office can not accept any responsibility for the loss of rights arising if the invention becomes public and is copied and the provisional applications have not been properly drafted.
